Features and Benefits of the BEST whip

High tensile strength stainless steel wire: the whip holds its shape, wires snap back into place. More movement in wires creates a "bonus" whipping action allowing more mixing with less effort. Completely rustproof.

Uniform wire spacing: More mixing surface, easier to clean.

Completely sealed handle: No areas where food may lodge and water may enter the handle. Creates a more sanitary, easy to clean product (most metal handle whips are NSF listed). No weak area created where whip and handle, or cap in end of handle, can detach.

Weight balanced: *BEST* whips are perfectly balanced so they are less tiring and easier to use. Larger sizes have weight added into the handle to balance heavier wire.

Handcrafted quality construction: *BEST* whips are designed and manufactured to last for many years. strict quality control assures uniform and consistent product.

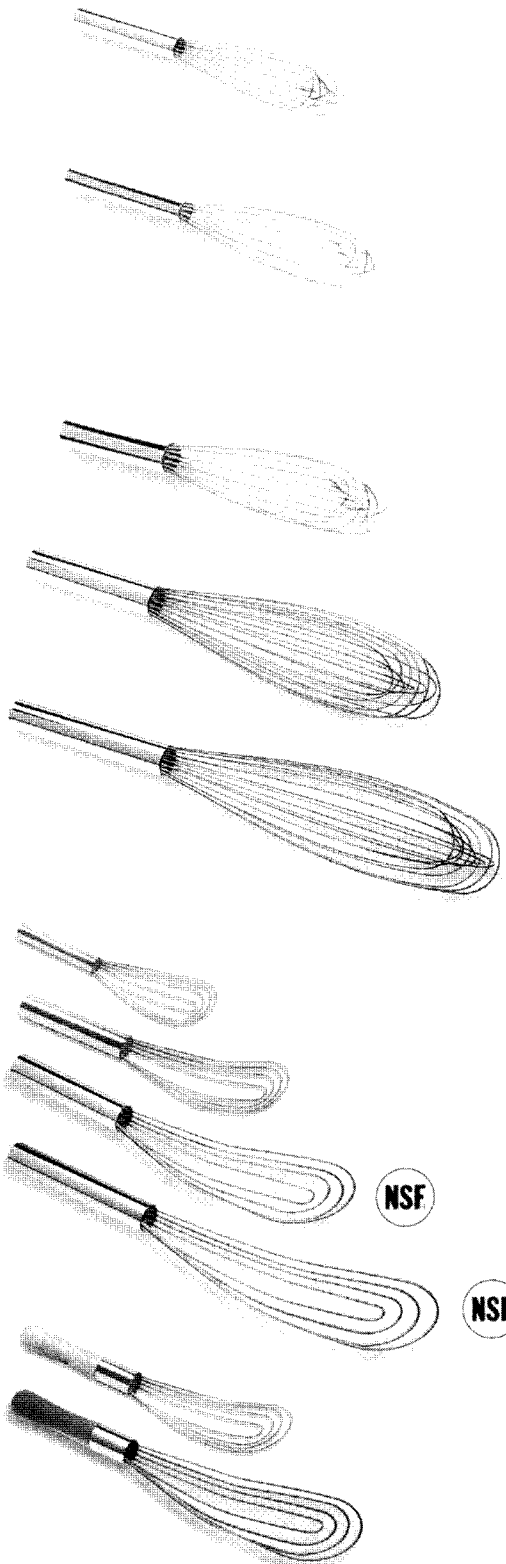

Complete assortment of over 100 styles: Exclusive, unique, and standard sizes make up the *BEST line*. *BEST* is the most complete line of whips and mashers in foodservice today, no need for additional vendors. *BEST* is your solution for all conceivable mixing and mashing needs your customers have.

Our Promise:

All *BEST* products are guaranteed against faulty construction. If you or your customer are unsatisfied with any product, it may be returned for replacement or refund.

This seal appears by all NSF listed products.
